

## Kidney Analysis Synapse 3D

Kidney Analysis is useful tool for Urologist. The software extracts kidney, renal cortex and regions including various surrounding organs from contrast – enhanced CT images and displays results as 3D images.

In addition, further extraction of the extracted kidney region and arterial territory region extraction are possible, region can be divided, and nephrectomy simulation can be performed.

## Kidney Analysis

Urology, Laparoscopic Surgeon & Radiologist  
Pre-operative simulation  
Partial nephrectomy  
Robotic surgery

## Use as much as you want !

Process, simulate and share, with no limite

## Fujifilm unique technology

Automatic extractions  
Partial nephrectomy planning  
Virtual clamping assessment  
**Developed with surgeons, for surgeons...**

# Kidney Analysis

## Benefits

- On site solution
- Identify anatomical variations
- Plan your clamping technique and tumor dissection
- Lower surgery time
- Better outcomes and more conservative surgery
