

Lung Analysis Scope Synapse 3D

Lung Analysis Scope is useful for planning bronchoscopy procedures. The software searches for optimal bronchus pathways towards a lung lesion.

A bronchoscope simulation is performed along the path, helpful to visualize difficult procedures prior to invasive examinations.

A bronchoscope simulation is performed along the path

Lung Analysis Scope

For Bronchoscopist

Pre Bronchoscope simulation for Biopsy

Perfect combination with mini probe

Peripheral lung nodules

Use as much as you want !

Process, simulate and share, with no limite

Fujifilm unique technology

Automatic Bronchus extraction

Automatic pathways finding

Semi automatic tumors and lymph node extraction

Fiducial marker planning and Virtual Assisted Lung Mapping

Lung Analysis Scope

Benefits

- On site solution
- Identify optimal bronchus pathways to reach the nodule
- Easy navigation to the correct airway
- Lower your procedure time
- Increase your findings
